## **DETAILED ACTION**

### ***Election/Restrictions***

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-7, drawn to a photomask (product), classified in class 430, subclass 5.
- II. Claims 8-20, drawn to a method for fabricating a pattern (claims 8-13, classified in class 430, subclass 311) and a method for manufacturing a semiconductor device (claims 14-20, classified in class 430, subclass 313, processes of using a photomask product).

Inventions I and II are related as a photomask product and processes of using the photomask product. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the processes for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case, the photomask product as claimed in Group I can be used in a materially different process of using that photomask product than is claimed in Group II, such as a process involving double exposure of a single photoresist layer on a working film through a first portion of the photomask product and then through a different second portion of the photomask product with intermediate alignment (for class 430, subclass 22) and optional subsequent coating of the working film through the resulting double patterned photoresist layer as a coating mask.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification and also because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even if the requirement is traversed (37 CFR 1.143).
